

Horbury Dental

care & implant clinic

making you smile for over 75 years

Immediate Implants

WHY SHOULD I CHOOSE HORBURY
DENTAL IMPLANT CLINIC?

EVERYTHING YOU
NEED TO KNOW

MEET THE HORBURY
IMPLANT TEAM

welcome...

WE BELIEVE THAT YOU SHOULD CHOOSE HORBURY DENTAL CARE TO LOOK AFTER YOU.

My family have been taking care of people in the local community for over 80 years. We are proud to be here providing the highest level of service for our patients.

Our team has the knowledge and experience to give you the very best treatment that modern dentistry can offer.

We understand that when you are facing the prospect of losing your natural

teeth, this can be a very worrying time. Understandably, patients are anxious and need to feel confident that they are in the best hands.

I promise that you will be treated with utmost dignity and respect. We provide the highest standard of dentistry with empathy and a real caring attitude. We are here to look after you and hold your hand through this time.

You will see from the case studies, that full mouth rehabilitation does change people's lives. It is a rehabilitation in every sense of the word; restoring function, restoring appearance, restoring confidence and restoring dignity.

The main treatment is a single day process; you arrive in the morning and leave in the afternoon with a completely new smile.

This information leaflet gives you some insight into what treatment involves. Please don't hesitate to ask us any questions you may have. I look forward to meeting you.

Mark Willings

WHY SHOULD I CHOOSE HORBURY DENTAL IMPLANT CLINIC?

We offer the highest standards of clinical excellence, and our team are highly experienced in single and multiple tooth replacements, as well as overdenture cases. We only employ modern established, main-line implant systems, backed by long standing clinical data. We are a modern, established, friendly local practice - an important consideration for any aftercare requirements.

IN SOME CIRCUMSTANCES PATIENTS FIND THEMSELVES WITH NO TEETH, OR MULTIPLE FAILING TEETH.

We can completely restore your smile whether it be a single tooth or full mouth rehabilitation. At Horbury Dental Care, we follow a specific protocol to replace your teeth in a day. After a comprehensive assessment, we can determine which method of full arch reconstruction would be suitable for you. X-rays and 3D imaging are used along with precision planning and design.

HOW WILL I BE CARED FOR?

Throughout your experience at Horbury Dental Care, you will be cared for by our team of dentists with a special interest in dental implants, skilled nurses and technicians. Our Referral Coordinators, Louise and Vicky, are also on hand to offer any advice, support, and guidance.

QUALITY & CARE

We only use UK based laboratories which are small for personalised service. This gives us the confidence that work is completed to the highest of standards and is not outsourced to cheaper overseas laboratories.

We follow strict policies for our dental materials, again only using recognised labels and top named brands.

Quality of care, quality of service and absolute attention to detail are what defines us. We have a passion to deliver an optimal experience for all our patients.

CASE STUDIES: BEFORE & AFTER

Case Study 1

David came to us because his front teeth were very loose and he was conscious his front tooth was about to fall out. The idea of dentures at 50 years old was something he did not want to consider. We treated both jaws; we removed all his teeth, placed implants and connected bridgework. He was able to benefit from same day treatment to replace all his failing teeth and at no time did he have to wear a denture.

Case Study 1

Case Study 2

Louise is 42 years old with gum disease. She had already lost her back teeth and hated her smile. We treated the gum disease in her lower jaw and successfully kept her lower natural teeth. In the upper jaw, we removed the remaining front teeth, placed a series of implants and placed bridgework, Louise benefitted from "same day" treatment and at no time did she need to wear a denture.

Case Study 2

Case Study 3

Sarah is 39 years old and hated her teeth. She had gum disease which led to drifting and movement of the teeth which had become loose and uncomfortable. Sarah hated her appearance so much she felt that she wouldn't go out and socialise. She did not smile and this affected her emotionally and psychologically.

We removed all her teeth, immediately placed implants and rehabilitated her with bridgework on the same day.

Sarah did not have to wear dentures and could see an immediate improvement in her smile. The benefits to her confidence were immediate! For the first time in years Sarah wanted to go out to socialise and show off her new smile. She told us "you will never know how grateful I am..... you have changed my life!"

Case Study 3

ALL ABOUT DENTAL IMPLANTS

WHAT IS A DENTAL IMPLANT?

A long-term solution for filling a gap. Dental Implants look and feel like real teeth. An implant is an anchor, or foundation, which replaces a tooth root in the jaw. They are made of titanium and biologically integrate or fuse to the bone. They are placed at key strategic locations in order to support fixed bridgework.

LET US BREAK DOWN THE IMPLANT PROCESS FOR YOU INTO 4 EASY STEPS:

STEP 1

Planning is crucial and we will take photos, CT scans and digital impressions. We work with our technician to plan treatment carefully and the results are discussed with you to gain your approval.

STEP 3

Healing is now required for approximately 6 months. When we are happy with progress, a new final bridge is made over several appointments.

STEP 2

You arrive at the surgery early one morning and will be met with one of our dedicated team. The failing teeth are removed and implants are placed, this is usually carried out under sedation to keep you comfortable. You will rest with us for several hours until the bridge work is made and in the afternoon your new smile will be restored.

STEP 4

Once the desired result has been achieved, we will continue to see you regularly to ensure your gum and bone health is maintained to the highest standard.

Please contact us if you would like to discuss any of these steps further.

FINAL LOOK...

Final bridge work is all made to the patient's wishes.

MEET THE IMPLANT TEAM

MARK WILLINGS

Mark qualified from Guys Hospital Dental School in London in 1991 and worked at Manchester Dental hospital for 10 years in the Oral Surgery Department. Here he gained a wealth of experience treating cancer patients with implants. These were complex cases requiring reconstructive treatment after ablative cancer surgery. Mark passed his membership exams of the Faculty of General Dental Practice in February 1998. In July 2004 he was awarded the Advanced Level Certificate of the Diploma in Implantology from the Royal College of Surgeons of England. Mark has over 30 years experience with dental implants and is often invited to speak at national conferences.

JAMES HUDSON

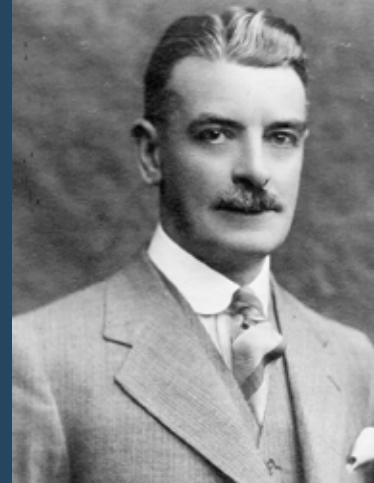

James graduated from Turner Dental Hospital, Manchester in 1995. For 6 years, James taught Restorative Dentistry at Charles Clifford Dental Hospital, Sheffield. James has completed implant training at The Royal College of Surgeons of England from where he was awarded the Advanced Level Certificate of the Diploma in Implant Dentistry. He holds a Masters degree in Clinical Periodontology (UCLAN) and is a Fellow of The College of Dentistry.

NICK LANE

Nick qualified from Leeds University in 2003 and joined the implant team in Horbury in 2012. He has a special interest in Implant and Restorative dentistry, completing Diplomas in both these subject areas with the Royal College of Surgeons of England. He is a Fellow of the College of Dentistry and completed his Masters in Restorative dentistry at Leeds.

TOM RAWLINS

Tom has been treating patients at Horbury Dental Care for over 10 years, having qualified from Leeds Dental Institute in 2010. He completed the Restorative Diploma at the Royal College of Surgeons in 2016 and a research project for an MSc certification at Leeds University. Tom enjoys providing more complex restorative dentistry, including restoration of the worn dentition and improving aesthetics. In 2022, Tom was awarded an implant diploma from ICE Dental Institute in Manchester.

THE HISTORY OF HORBURY DENTAL CARE

In 1941, Henry "Vincent" Willings came to Wakefield and started work as a dentist in Horbury and Lupset. In 1944, he bought the practice and continued to work between the two premises.

He was joined in 1967 by his eldest son **Eric Vincent Willings**. After Vincent retired in 1987, Eric ran the practice and had three Associates working with him.

Mark Vincent Willings qualified from Guys Hospital in London in 1991 and returned to Wakefield to join the Associate team and work with his father in 1994.

In 1998, Eric and Mark consolidated the practice and moved to the present location in Queen Street, Horbury. These purpose built premises were state of the art and moved the practice into a new era as Mark became a partner in the business.

In 2020, **Harriet Elizabeth Willings** joined the team after graduating from Newcastle Dental School. Harriet married Jordan Hobbah (also a graduate of Newcastle) in September 2021 and Jordan joined our Associate team in October 2021.

Horbury Dental
care & implant clinic
